#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heese (US Pat. 3,823,753) in view of Madrid et al. (US Pat. 5,832,779).

Heese (US Pat. 3,823,753) anticipates the claimed invention except for the use of a non-hydraulic means for transmitting mechanical power to a piston, wherein this particular mechanical power means is responsible to locking the position of the piston.

Madrid et al. (US Pat. 5,832,779) discloses a non-hydraulic means for transmitting mechanical power to a piston, wherein this particular mechanical power means is responsible to locking the position of the piston. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have equipped the means for transmitting mechanical power of Heese (US Pat. 3,823,753) with a position locking mechanism of Madrid et al. (US Pat. 5,832,779) so that inadvertent movement of a static linear actuator may be avoided; also so that should an external force overwhelm the actuating mechanisms of the linear actuator, the position lock could lock the linear actuator and avoid catastrophic movement of the linear actuator and that which it movement.

Claims 9-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heese (US Pat. 3,823,753) in view of Stringer (US Pat. 5,778,733).

Heese (US Pat. 3,823,753) anticipates the claimed invention except for the use of a non-hydraulic means for transmitting mechanical power to a piston, wherein this particular mechanical power means is responsible to locking the position of the piston.

Stringer (US Pat. 5,778,733) discloses a non-hydraulic means for transmitting mechanical power to a piston, wherein this particular mechanical power means is responsible to locking the position of the piston. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have equipped the means for transmitting mechanical power of Heese (US Pat. 3,823,753) with a position locking mechanism of Stringer (US Pat. 5,778,733) so that inadvertent axial translation of the threaded shaft may be avoided.

#### Response to Arguments

Applicant's arguments with respect to claim 3/16/2004 have been considered but are most in view of the new ground(s) of rejection.

## **FACSIMILE TRANSMISSION**

Submission of your response by facsimile transmission is encouraged. Group 3600's facsimile number is (703) 305-3597. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence <u>not</u> permitted by facsimile transmission, see MPEP 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission.

Application/Control Number: 10/082,163

Art Unit: 3682

Responses requiring a fee which applicant is paying by check should not be submitting by facsimile transmission separately from the check.

Responses submitted by facsimile transmission should include a Certificate of Transmission (MPEP 512). The following is an example of the format the certification might take:

I hereby certify that this correspondence is being face	csimile transmitted to the Patent and
Trademark Office (Fax No. (703) 305-3597) on	
	(Date)
Typed or printed name of person signing this certifi	cate:
(Signature)	

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and MPEP 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Colby Hansen whose telephone number is (703) 305-1036. The examiner can normally be reached on Monday through Thursday and every other Friday from 7:30 PM to 5:00 PM (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bucci, can be reached on (703) 308-3668. Any inquiry of a general

Art Unit: 3682

nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-2168.
